RADIOLOGY REPORT

Name: KOMAKECH BRIAN
PID: MKN-23-1732
Study Date: 2024-02-08
Ref. Doc:
DOB: 1984-12-12
Gender: M
History: Left-sided tension pneumothorax and left lower lobe collapse were diagnosed on 23-12-2023, following Chest Trauma. Do a review/follow-up chest X-ray.

CHEST X-RAY (PA VIEW)

Findings

The thoracic soft tissues and rib cage are normal.

There is a left lung collapse and hydropneumothorax on the same side. The right lung field, the hilar shadows, the superior mediastinum and the heart shadow are normal.

The right diaphragmatic contours and the right costophrenic angles are normal

The subdiaphragmatic areas are normal

CONCLUSION

These are features of left side hydropneumothorax with left lung collapse

Reported by: DR. ALFRED BULAMU
